

Science is good when we are using collaboration to work together and support each other's understanding.

Science is good when we show lots of curiosity and ask questions about the world around us.

Science is good when lessons are led by children, and they are involved in practical activities and using the correct scientific vocabulary.

Science is good when we are engaged in lessons and are showing lots of curiosity. We show this through exploration and through asking questions.

Our Vision

At Kestrel Mead our Science lessons should provide all of our children with a broad, relevant and enriched curriculum, so that children have the character to make a positive contribution to our society, and are knowledgeable, skilled and ready for the next phase of their education.

Science is good when we find out about the world around us and when we learn about different scientists and how they have changed the world.

Science is good when we get to find out things independently and decide on the best method to answer our scientific questions.

Science is good when we do 'WOW' experiments and understand the Science behind them.
